OUTPUT:

SOCIAL MEDIA USAGE FOR BETTER HEALTH

BENEFITS USAGE LINKS SURVEY

- Social media provide HCPs with tools to share information, to debate health care policy and practice issues, to promote health behaviors, to engage with the public, and to educate and interact with patients, caregivers, students, and colleagues
- HCPs can use social media to potentially improve health outcomes, develop a professional network, increase personal awareness of news and discoveries, motivate patients, and provide health information to the community. Physicians most often join online communities where they can read news articles, listen to experts, research medical developments, consult colleagues regarding patient issues, and network.

Advantages of social media in health care

- ☐ An excellent platform for exchanging ideas and providing education among professional workers.
- ☐ Quickly increasing awareness about diseases ,precautions,or even preemptive measures against diseases rapidly becoming pandemic,to a vast audience.
- ☐ Providing a means of communicating with other healthcare proffesionals, patients and their families, in education or teaching.
- ☐ Extends an avenue of learning about current treatment options available for diseases, medications and procedures.
- ☐ Showcase community activities and professional achievements.

Disadvantages of social media in health care

- DLack of Control from the Healthcare Professional
- ☐ The Danger of Self-Diagnosis.
- ☐ Patient Confidentiality Violations
- ☐ Spreading Misinformation:
- ☐ Interfering with the Doctor-patient Relationship

Social media in health care professionals

Social media provide HCPs with tools to share information, to debate hea... A survey of more than 4,000 physicians conducted by the social media site QuantiaMD found that more than 90% of physicians use some form of social media for personal activities, whereas only 65% use these sites for professional reasons
